# 1 2025 Rules for Fiber-Reinforced Concrete Bowling Ball Competition

2 3

# G1-Student Teams

- 4 Only 1 team per school is eligible for this competition.
- 5 All members of a given team must be from the same school.
- 6 A team is limited to 3 to 8 students currently enrolled in an undergraduate college or
- 7 university program.
- 8 Each team must have a supervising faculty advisor to provide guidance and to help
- 9 understand, and ensure compliance with, the rules of the competition.
- 10 Each team must have one (1) primary contact.
- 11 Team members attend the competition and compete with their bowling balls; all members
- 12 are welcome, a minimum of three (3) members are preferred, but at least one (1) must13 attend.
- 14 Each team will be assigned a Check-In Time by the Judges that will be used for scheduling
- 15 and scoring the day of the competition.
- 16

### 17 G2-Design Prediction Category of the Bowling Ball Competition

- 18 This category is analogous to a project that was designed and predicted to behave within 19 certain criteria.
- 20 The project is making, bowling, and crushing bowling balls by following competition
- 21 rules.
- 22 Before the convention, each Team is to design and make bowling balls.
- 23 Also, before the convention, each Team is to predict how their bowling balls will perform
- 24 in the mass, diameter, bowling, and toughness test areas on the day of the competition.
- 25 The predictions can be from calculations, experience, and practical knowledge.
- 26 The Design Prediction Category compares the team's submitted performance predictions
- against the team's results during the competition.
- 28 Teams are scored in the mass, diameter, bowling, and toughness tests as follows:
  - Absolute value of (Team prediction Team tests at competition)
- 30 Each team is then force-ranked from their score into a 90-points based system (i.e., 90%).
- 31 The remaining 10-points (i.e., 10%) will be from the Specifications Test.
- 32 Prizes will be awarded for the Design Prediction Category to the 3-teams that have the
- least difference of all the teams between their team predictions and their team results at thecompetition.
- 34 co 35

29

# 36 G3-Analysis Test Category of the Bowling Ball Competition

- 37 This category is analogous to a project that was analyzed and tested for comparison to
- 38 plans and specifications.
- 39 Again, the project is making, bowling, and crushing bowling balls by following
- 40 competition rules.
- 41 At the convention, each Teams' bowling balls will be tested in the mass, diameter,
- 42 bowling, and toughness test areas.
- 43 These tests are a typical analysis of practical testing measurements.
- 44 The Analysis Test Category compares the team's results during the competition against the
- 45 target values as stated in these Rules.
- 46 Teams are scored in the mass, diameter, bowling, and toughness tests as follows:
- 47 Absolute value of (Competition target Team tests at competition)
- 48 Each team is then force-ranked from their score into a 90-points based system (i.e., 90%).
- 49 The remaining 10-points (i.e., 10%) will be from the Specifications Test.

- 50 Prizes will be awarded for the Analysis Test Category to the 3-teams that have the least
- 51 difference of all the teams between the competition target values and their team results at
- 52 the competition.
- 53

### 54 G4-Judging

- 55 Safe and professional behavior is expected during the competition.
- 56 The judges retain the right to interpret, modify, or eliminate any section or sections of
- 57 these rules as special circumstances arise.
- 58 The judges have final determination regarding what is acceptable for continued
- 59 participation in the competition.
- 60 Teams may not be eligible for prizes if they:
- do not follow the Rules of the competition,
- miss the scheduled dates for Registration or Submittal,
- Check-In either too early or too late on the day of the Competition,
- run or walk fast with a ball anywhere,
- throw, launch, or catapult a ball anywhere,
- behave in a way that is not safe,
- behave in a way that is disruptive, offensive, or not professional, and
- submit bowling balls outside the limits of any of the 5 test areas.
- The judges may allow teams who are not eligible for prizes to continue to participate in the competition, but they are still not eligible for prizes.
- Egregious violation of the Rules may result in a Team being removed from the competition
- and the school risks recommendations to ACI Committee S801 for sanctioning of the team,
- their advisor, and/or school/university from participation in future competitions.
- 74 The judges retain the right to determine any infraction of the Rules.
- 75

# 76 G5-Bowling Ball Identification

- 77 Each bowling ball will be labeled during Check-In by the Judges so that they can be
- 78 uniquely identified.
- 79 The labels will be approximately  $2 \times 3$  inches (50 x 75 mm).
- The location of the label on each ball can be decided by the Teams to minimize impact on any decoration.
- 82 Once labels are affixed to the bowling balls by the judges they must not be removed or 83 repositioned.
- 84

# 85 **T1-Specifications Test** (10 % of the points for each Category)

- 86 This test is about following the Rules with submittals before and during the competition.
- 87 Every Team starts with the highest score in this test.
- 88 The Team score will decrease due to incorrect paperwork as described under "S1-
- 89 Worksheet Submittal" and incorrect quantities as described under "S7-Competition90 Submittal".
- 91

# 92 S1-Worksheet Submittal

- 93 Each Team must download, fill in, and submit the 2025 Design Submittal.xlsx file (the
- Submittal file) found at the <u>SUBMITTAL</u> link in the upper right corner of the Competitionwebpage.
- 96 Within the Submittal file are two (2) worksheets/tabs: *Team Acronym* and *Example*.

- 97 Each Team's bowling balls are to be constructed with Concrete Materials, Fiber
- 98 Reinforcement, and Other Ball Materials per the Submittal and sections S2, S3 and S5 of 99 these Pules
- 99 these Rules.
- 100 Each Team must fill out the *Team Acronym* worksheet per their chosen mixture type
- 101 (selected in cell B20) and bowling ball design.
- 102 Each Team must refer to and follow the *Example* for cell formatting and number of places
- 103 after the decimal for the numerical Values and Volumes.
- 104 Each Team must fill out the worksheet completely (refer to the *Example*).
- 105 Do not add or delete rows or columns to the *Team Acronym* worksheet.
- 106 Before submitting their completed Submittal file, each Team must:
- 107 1. change the name of the *Team Acronym* tab to their Team's selected acronym, and
- 108
  2. change the name of the file to include their team's acronym after the word

- Each Team must upload their completed Submittal file to ACI via the Competition
- Each Team must upload their completed Submittal file to ACI via the Competition
- 112 registration link by the date in the Schedule.
- 113

#### 114 S2-Concrete Materials

- 115 Teams are to design and construct their bowling balls from 1 of the 3 FRC mixture types: a
- fiber-reinforced concrete mixture, UHPC mixture, or UHPC pre-packaged (pre-blended) product.
- 118 A list of UHPC suppliers from the ACI 239 UHPC committee is provided at the
- 119 <u>MANUFACTURERS</u> link on the Competition webpage as possible suppliers of UHPC
- 120 related products.
- 121 Patching, filling, or repair of honeycombed surfaces after casting is allowed.
- 122 Materials to correct the honeycombed surfaces must be selected from the same materials as
- 123 used to construct the Team's bowling balls.
- 124

# 125 S3-Fiber Reinforcement

- 126 The bowling ball must be made with fiber reinforcement.
- 127 No other type of reinforcement is allowed.
- 128 A list of fiber suppliers from the ACI 544 Fiber Reinforced Concrete committee is
- 129 provided at the MANUFACTURERS link on the Competition webpage as possible
- 130 suppliers of fiber.
- Only the fiber material types described by the ASTM specifications listed in the Submittalfile can be used.
- 133 Fibers must be commercially available and unaltered after receiving them from the
- 134 manufacturer.
- 135 All fibers must be the same length and between 10- and 55-mm.
- 136 The fibers may be used at any dosage or volume fraction.
- 137

#### 138 S4-FRC/UHPC Mixture Density

- 139 Each Team must calculate the density of the FRC/UHPC mixture used to construct their
- 140 bowling balls.
- 141 The mixture density should not include the density of Other Ball Materials nor Aesthetic
- 142 Materials.
- 143

#### 144 S5-Other Ball Materials

- 145 The bowling ball mass can be met with different materials of different densities (i.e. Other
- 146 Ball Materials) in addition to the listed Concrete Materials and Fiber Reinforcement.
- 147 The Other Ball Materials cannot be a Concrete Material or a Fiber Reinforcement.
- 148 The Other Ball Materials must be encased within the bowling ball mixture.
- 149 The Other Ball Materials can be grouped together as a centered Core.
- 150 The Other Ball Materials can also be homogeneously Distributed within the FRC/UHPC 151 mixture.
- 152 The bowling balls may have multiple layers of different densities and/or one core with a
- 153 different density.
- 154 Expanded polystyrene beads mixed into the FRC/UHPC mixture is an example of
- 155 Distributed materials.
- 156 A balloon filled with expanded polystyrene beads and encased within the FRC/UHPC
- 157 mixture is an example of Core materials.
- 158 The use of Other Ball Materials is optional.
- 159 The text used in the Submittal for Other Ball Materials should briefly describe each
- 160 material (see the *Example* for examples).
- 161

#### 162 S6-Design Predictions

- 163 Each Team must determine their predictions on how their bowling balls will perform in the
- 164 mass, diameter, bowling, and toughness test areas during the competition.
- 165 Indicate your Team's predictions in your Team's Submittal file.
- 166

### 167 S7-Competition Submittal

- 168 Each team shall bring to the competition:
- 2 bowling balls
- 2 copies of their Submittal worksheet
- For teams using UHPC Pre-packaged by Supplier mixtures provide:
  - 2 copies of its Technical Data sheet
  - 2 translucent sample bags of the dry mixture with approximately 75 grams including some fibers in each bag
  - For teams making their own mixtures:
    - 2 copies of their fiber's Technical Data sheet
    - 2 translucent sample bags of each fiber used with at least 10 fibers in each bag
- 177 178

172 173

174

175

176

# 179 **T2-Mass Test** (10% of the points for each Category)

- 180 The target mass of each bowling ball is 5,250 g.
- 181 The mass of each bowling ball shall be within the range of  $5,250 \text{ g} \pm -500 \text{ g}$ .
- 182 The mass of each bowling ball will be measured during the competition.
- 183 The average mass of a Team's two bowling balls will determine the Team's points.
- 184 A Team will have no Mass Test points if any ball's mass is outside of the stated range.
- 185

#### 186 *T3-Diameter Test* (10% of the points for each Category)

- 187 The bowling ball shall be spherical.
- 188 The target diameter of each bowling ball is 190 mm.
- 189 The diameter of each bowling ball shall be within the range of  $190 \pm 15$  mm.
- 190 The diameter of each bowling ball will be measured along three arbitrarily selected axes
- 191 during the competition.

- 192 The average diameter of a Team's 2 bowling balls will determine the Team's points.
- A Team will have no Diameter Test points if any ball's diameter is outside of the statedrange.
- 195
- 196 *T4-Bowling Test* (30% of the points for each Category)
- 197 The ball selected by the judges for bowling will be used by the team to "roll" and score in 198 modified bowling.
- 199 The target and highest score for the bowling test is 36.
- 200

205

- 201 The competition's modified bowling consists of:
- A minimum of 6 frames of bowling to be completed within an allotted time (actual number of frames bowled decided by judges on the day of the competition)
- 6 standard-sized bowling pins
  - Only 1 roll of the ball per frame
- A bowling lane with approximate dimensions as shown in Image 2
- A stationary, flat inclined wooden ramp is used to achieve a reasonable ball speed
- See Images 1, 2, and 3 further below
- 209 A team member will be identified as the "Team Bowler" for all frames.
- 210 A team member will be identified as the "Team Returner" for all frames.
- 211 No practice rolls are allowed for any team or individual prior to the competition test.
- 212 The ramp is stationary and the ball's starting position on the ramp is determined by the
- 213 Team Bowler and Team Returner before releasing the ball.
- The Judge will tell the Team Bowler when the ball can be positioned on the ramp.
- When instructed to do so, the Team Bowler will hold the ball against the backstop at the top of the ramp.
- 217 The Team Returner, positioned at the pin end of the bowling lane, may assist the Team
- 218 Bowler by direction only to align the ball.
- 219 Once the ball is aligned as desired, the Team Bowler releases the ball by simply removing 220 their hands from the ball.
- 220 their hands from the ball.
- 221 No pushing of the ball is allowed; the ball accelerates by gravity only.
- 222 After the ball is released and descends, the rolling ball may not be chased or interrupted.
- 223 The resulting "knocked down" pin count will be recorded as the score for that frame.
- The Judge will tell the Team Returner when to return the ball to the Team Bowler.
- If 6 frames are not bowled within the allotted time, the score attained during the allotted
- time will be the team's bowling score.
- 227 The judges will be responsible for setting the pins and recording the score.
- 228

#### 229 **T5-Toughness Test** (40% of the points for each Category)

- The ball selected by the judges for crushing will be placed in a testing apparatus by the judges for controlled loading.
- 232 On the day of the competition, the judges will set a constant displacement rate for the test
- between 5.00 and 12.50 mm per minute.
- A load is continually applied to the ball.
- The load will be recorded at every 5 mm of crosshead displacement between 0 and 25 mm.
- The target and highest score is obtained when the load at all 5 deflections is constant
- 237 (same), which results in a coefficient of variation (COV) of 0%.

- 238 The COV is the standard deviation of the 5 loads divided by the average of the 5 loads, and
- 239 a 0% COV exemplifies an ideal elasto-plastic behavior from the fiber-reinforced concrete matrix.
- 240
- 241 A team will have no Toughness Test points if:
- 242 1. any displacement load is less than 3,000 pounds or more than 60,000 pounds, or
- 2. an average of the loads is less than 5,000 pounds or more than 50,000 pounds. 243
- 244 See Image 5 further below.
- 245
