The ACI logo consists of the letters 'aci' in a lowercase, sans-serif font, with a stylized arc above the 'i' that is colored with a gradient from blue to red.

Introduction

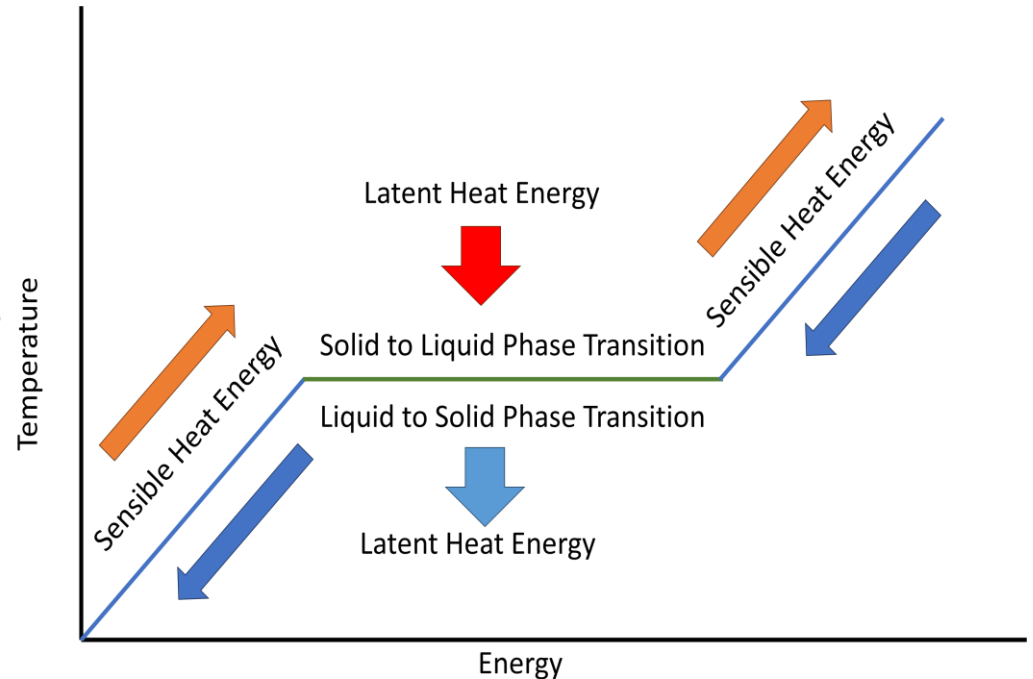

Why PCMs in Concrete ??

Thermoregulation due to latent heat capacity at transition temp

Urban overheating mitigation, thermal stress relief, freeze thaw durability etc.

Challenges :

- Lowered mechanical strength
- Lowered thermal conductivity

UNIVERSITY OF
ILLINOIS
URBANA-CHAMPAIGN

THE WORLD'S GATHERING PLACE FOR ADVANCING CONCRETE

aci CONCRETE
CONVENTION

Objectives

- Develop PCM concretes for horizontal surfaces through binder modification
- Analyze the compression and fracture properties of these PCM concretes for application as horizontal surfaces

UNIVERSITY OF
ILLINOIS
URBANA-CHAMPAIGN

Microencapsulated PCMs

Particle Size Distribution

Powder Form

Particle size (3µm to 50 µm)

Melamine-formaldehyde shell (10-15 wt.%)
Paraffin wax core (85-90 wt.%)

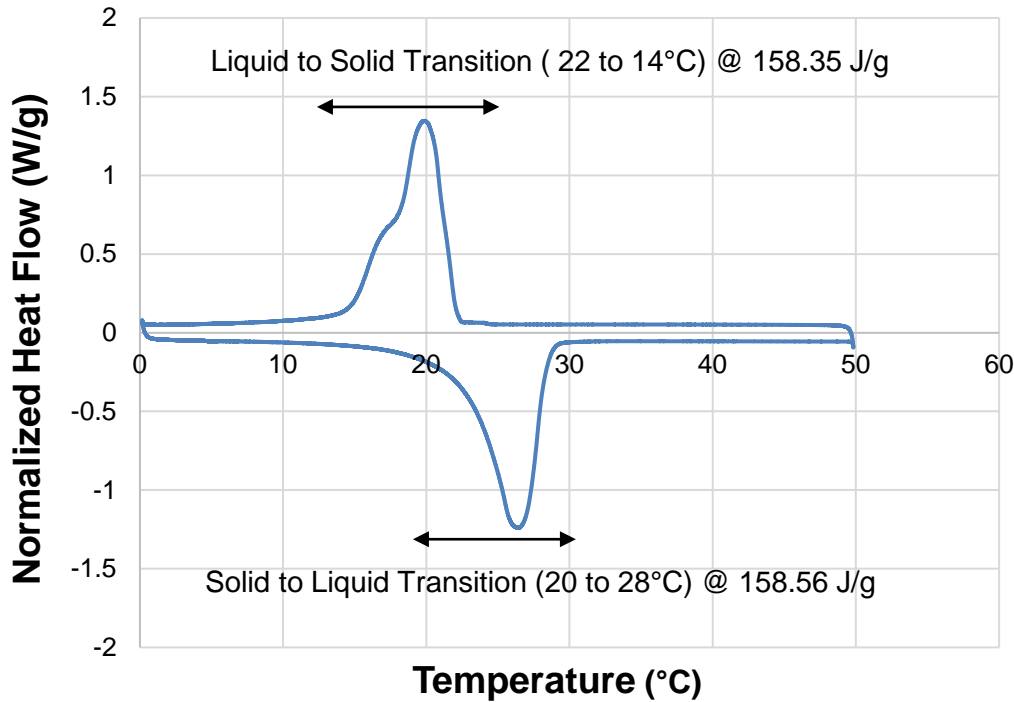

UNIVERSITY OF
ILLINOIS
URBANA-CHAMPAIGN

Materials

Microencapsulated PCMs

Latent Heat Storage

Day/Heating

+158 J/g

UNIVERSITY OF
ILLINOIS
URBANA - CHAMPAIGN

THE WORLD'S GATHERING PLACE FOR ADVANCING CONCRETE

Materials

Mix Design

Densifying the matrix through progressive filling with additives while keeping paste content constant

Particle Size Distribution

— Nano Silica — mPCM — Silica Fume
 — Cement — FA — CA

Cement + Water + Aggregate

Methods & Results

Fracture Properties

Critical Tip Opening Displacement – $CTOD_C$ (mm)

UNIVERSITY OF
ILLINOIS
URBANA-CHAMPAIGN

* For steel fibers test was ended at CMOD chosen arbitrarily.

Conclusions

- No significant impact of additives on thermal conductivity
- Reduction in compressive strength (51%) > Reduction in fracture energy (30%)
- Silica based additives : potential solutions for compressive strengths comparable to low volume traffic roads
- Steel fibers : potential solution for fracture energy enhancement
